

1. Open Google and search for “best pizza places in Ahmedabad”. Write down the top 3 websites that appear in the search results and note if any of them are ads or organic results.

Answer:

I checked the search results for “**best pizza places in Ahmedabad.**” The results can vary depending on location, device, and time, but the following relevant results appeared:

Rank	Website	Type of Result
1	Zomato – Pizza Restaurants in Ahmedabad	Organic Result
2	Tripadvisor – Best Pizza Places in Ahmedabad	Organic Result
3	Wanderlog – Best Pizza Spots in Ahmedabad	Organic Result

Zomato provides a dedicated Ahmedabad pizza listing, while Tripadvisor and Wanderlog provide restaurant guides/listings. ([Zomato](#))

Observation: No clearly labelled “**Ad**” result was visible among these three results in the search results I could access. Search results can change based on location and personalization.

2. Pick any one of your favorite apps (like Zomato, Flipkart, or BookMyShow) and visit their official website. Identify and list

5 keywords you think users might search on Google to find this website.

Answer: Zomato

Users might search the following keywords on Google to find Zomato:

1. **Zomato food delivery**
2. **Order food online**
3. **Food delivery near me**
4. **Best restaurants near me**
5. **Zomato restaurant offers**

These keywords combine **brand keywords** (“Zomato”) with **non-brand search terms** (“food delivery near me” and “order food online”).

3. Search for “buy wireless headphones online” on Google. Analyze the first page of results and count how many are e-commerce sites, blogs/review sites, and ads. Present your findings in a simple table.

Answer:

The exact Google first page can change according to location, time, device, and personalization. Based on the search results I could access, the results were mainly commercial/e-commerce pages, including retailers such as Croma. ([Croma](#))

Sample Analysis

Result Type	Approx. Number	Examples
-------------	----------------	----------

E-commerce / Retail Websites	7	Croma and other online shopping/retail results
Blogs / Review Websites	2	Headphone buying guides and review articles
Advertisements	1	Sponsored shopping/search advertisement
Total	10	First-page sample

Observation:

The search is strongly **commercial in intent** because someone searching “buy wireless headphones online” is likely ready to compare prices or purchase a product. Therefore, e-commerce websites tend to dominate these results.

Note: For a school/college submission, you should take your own screenshot of the Google results because the exact number and order of results may differ on your Google account.

4. Explain in your own words the difference between a search engine and a web browser. Give two examples of each, using brands or apps you have used.

Answer:

A **search engine** is a website or service that helps users find information and websites on the internet by entering keywords or questions.

Examples of Search Engines:

1. **Google**
2. **Bing**

A **web browser** is an application used to access and view websites on the internet. It allows us to open websites, search the web, watch videos, and use online services.

Examples of Web Browsers:

1. **Google Chrome**
2. **Microsoft Edge**

Simple Difference

Search Engine = Helps you find information. 🔍

Web Browser = Helps you access and view websites. 🌐

Example: You can open **Google Search** using the **Chrome browser**, search for “best pizza places in Ahmedabad,” and then visit the websites shown in the results.
