

1. Digital Marketing Strategy for a New Food Delivery App

Question:

Sign up for a free ChatGPT account and ask it to generate a basic digital marketing strategy outline for a new food delivery app targeting college students.

Answer:

For this activity, I used ChatGPT to create a basic digital marketing strategy for a fictional food delivery app called **CampusEats**.

Strategy Element	Plan
Target Audience	College students aged 18–24
Main Objective	Increase app awareness, downloads, and food orders
Value Proposition	Affordable meals, student discounts, fast delivery, and easy ordering
Social Media	Instagram, YouTube Shorts, and Snapchat
Content Strategy	Food reels, memes, student testimonials, polls, contests, and limited-time offers
Influencer Marketing	Partner with college influencers and student content creators
Promotional Offers	First-order discounts, referral rewards, and group-order offers
Paid Advertising	Instagram and Google Ads targeted toward students
Retention Strategy	Personalized offers, loyalty points, and push notifications
KPIs	App downloads, orders, engagement rate, conversion rate, and customer retention

Conclusion: The strategy focuses on affordable pricing, social-media engagement, influencer marketing, and student-specific offers because college students are highly active on digital platforms and are price-conscious consumers.

2. Instagram Campaign Ideas for a Local Fashion Boutique

Question:

Use ChatGPT to brainstorm five unique Instagram campaign ideas for a local fashion boutique aiming to attract Gen Z customers.

Answer:

I created five campaign ideas for a fictional boutique called **UrbanVibe Boutique**, targeting customers aged 18–22.

No.	Campaign Idea	Description
1	#StyleSwitch Challenge	Ask followers to create two different outfits using the same clothing item and post them as Reels.
2	Fit Check Friday	Encourage customers to post their boutique outfits every Friday and tag the store for a chance to be featured.
3	Pick My Outfit	Post two or three clothing combinations and let followers vote through Instagram Stories.
4	₹999 Gen-Z Look	Create complete trendy outfits under ₹999 and promote them through short Reels.
5	Campus Ambassador Hunt	Invite college students to become Instagram ambassadors and receive discounts or free products in exchange for content.

Conclusion: These campaigns use **Reels, polls, user-generated content, challenges and student participation**, which can help a local fashion boutique connect with Gen Z.

3. Seven-Day Social Media Content Calendar for a Music Streaming App

Question:

Give ChatGPT a description of a fictional music streaming app and ask it to create a seven-day content calendar for launching the app on social media.

Answer:

Fictional App Description:

TuneWave is a new music-streaming app offering personalized playlists, regional Indian music, independent artists, podcasts, and AI-powered music recommendations. It targets users aged 16–30.

7-Day Launch Content Calendar

Day	Platform	Content	Purpose
Day 1	Instagram, Facebook	“ Something New Is Coming ” teaser video	Build curiosity
Day 2	Instagram Reels, YouTube Shorts	“ Meet TuneWave ” app introduction	Create awareness
Day 3	Instagram Stories	Poll: “ What do you listen to? ”	Encourage interaction
Day 4	Instagram, YouTube	Demonstration of AI-powered personalized playlists	Highlight unique feature
Day 5	Instagram Reels	Emerging artist spotlight	Support independent artists
Day 6	Instagram + X	Launch contest: “ Create Your Perfect Playlist ”	Generate user participation
Day 7	All platforms	Official launch announcement + download CTA	Drive app downloads

Suggested Campaign Hashtag:

#TuneYourWave

Conclusion: The calendar gradually moves customers from **awareness** → **engagement** → **product education** → **participation** → **download**, creating a structured launch campaign.

4. WhatsApp Promotional Message for an IPL Fantasy League App

Question:

Use ChatGPT to write a sample WhatsApp promotional message for a new IPL cricket fantasy league app, then edit the result to make it more engaging for your friends. The final message must be under 40 words and include an emoji.

Answer:

Initial AI-generated message:

"Hey friends! 🏏 The IPL is here! Join our new fantasy cricket league, create your dream team, compete with friends, and win exciting rewards. Download the app today and prove your cricket knowledge!"

Edited and more engaging version:

IPL Fantasy Promotion

🏏 IPL is ON! 🔥 Think you can build the ultimate fantasy team? Join our league, challenge the squad, and show everyone who really knows cricket! Download the app and let the games begin! 🏆

Word count: 31 words, so it meets the **under-40-word** requirement.

5. Comparison of Two ChatGPT Marketing Strategy Outlines

Question:

Compare two different marketing strategy outlines generated by ChatGPT for a new online movie ticket booking service: one using the prompt "Create a digital marketing plan for a startup" and another using "Create a digital marketing plan for a startup like BookMyShow targeting college students." List three key differences and explain which plan is more suitable for your target audience.

Answer:

The two prompts produce different strategies because the first is **general**, while the second specifies both the **business model and target audience**.

Factor	Plan 1: General Startup	Plan 2: BookMyShow for College Students
Target Audience	General customers	College students aged 18–24
Marketing Channels	General social media, Google Ads, email, website	Instagram, YouTube Shorts, college influencers, WhatsApp and campus campaigns
Offers	General discounts and promotions	Student discounts, group booking offers and college-specific promotions
Content	General movie and entertainment content	Memes, movie Reels, student polls, campus contests and trending content
Influencer Strategy	General influencers	College influencers and student creators
Main Goal	Increase overall bookings and brand awareness	Increase bookings and engagement among college students

Three Key Differences

1. Targeting:

The first plan targets a broad audience, while the second specifically focuses on college students.

2. Marketing Channels:

The general plan may use standard digital channels, whereas the student-focused plan emphasizes platforms and strategies popular with students, such as Instagram Reels, college influencers and WhatsApp.

3. Promotional Strategy:

The general plan may offer standard discounts, while the student-focused plan can use **student discounts, group booking offers, referral rewards and campus contests**.

Which Plan Is More Suitable?

Plan 2 — the BookMyShow-style plan targeting college students — is more suitable if the target audience is college students. It is more specific and allows the business to create personalized content, offers and campaigns based on students' interests, budgets and movie-going habits.

Overall Conclusion

These activities show that **AI tools such as ChatGPT can help marketers generate strategy ideas, social-media campaigns, content calendars, promotional messages and audience-specific marketing plans quickly**. However, the generated ideas should be reviewed and customized according to the actual brand, audience and marketing objectives.
