

1. Customer Persona for a Daily-Use App

Question:

Pick any one app you use daily, such as Zomato, Instagram, or Flipkart, and create a basic customer persona for it, including age, location, interests, and digital habits.

Answer:

I have selected **Instagram**.

Customer Persona: “Riya Sharma”

Category	Details
Name	Riya Sharma
Age	21 years
Location	Ahmedabad, Gujarat, India
Occupation	College Student
Interests	Fashion, music, travel, food, photography and entertainment
Devices Used	Smartphone and laptop
Digital Habits	Uses Instagram several times a day, watches Reels, follows influencers and brands, shares Stories and chats with friends
Preferred Content	Short videos, memes, fashion inspiration, music trends and food content
Online Shopping Habit	Discovers products through Instagram posts, influencers and advertisements
Main Motivation	Entertainment, social interaction, discovering trends and keeping up with friends
Main Challenge	Too many advertisements and repetitive content

Key Insight:

Riya is highly influenced by **short-form video content and recommendations from influencers**. Therefore, Instagram marketing campaigns targeting users like her should focus on engaging Reels, relatable content and influencer collaborations.

2. Customer Journey Funnel for a Swiggy User

Question:

Map out a simple customer journey funnel for a Swiggy user. List the key stages from discovering the app to placing their first food order, and briefly describe what the user does at each stage.

Answer:

Stage	What the User Does
1. Awareness	The user sees a Swiggy advertisement, Instagram Reel, YouTube ad, or recommendation from a friend.
2. Interest	The user becomes interested and searches for Swiggy on Google or visits the Swiggy website/app store page.
3. Consideration	The user compares restaurants, food prices, delivery charges, ratings and available offers.
4. Sign-up/Trial	The user downloads the app, creates an account and explores the available restaurants and menus.
5. Conversion	The user selects a restaurant and food items, applies an offer and places their first order.
6. Post-Purchase	The user receives the order and evaluates the food, delivery experience and overall service.
7. Loyalty	If satisfied, the user returns to Swiggy for future orders and may recommend it to friends.

Simple Funnel:

Awareness → Interest → Consideration → Sign-up → First Order → Satisfaction → Loyalty

Example:

A college student sees a “**50% OFF on First Order**” advertisement on Instagram → downloads the app → checks nearby restaurants → selects a meal → applies the discount → places the first order.

3. Customer Personas for a New Music Streaming App

Question:

Use ChatGPT or any AI tool to generate three different customer personas for a new music streaming app targeting college students in India. Copy the personas into your assignment and highlight one interesting insight you found.

Answer:

For this activity, I created three personas for a fictional music-streaming app called **TuneWave**, which targets college students in India.

Persona 1: The Bollywood Fan

Category	Details
Name	Ananya
Age	19
Location	Mumbai, Maharashtra
Course	B.Com Student
Interests	Bollywood music, dance, Instagram Reels and movies
Music Habit	Listens to music while travelling and studying
Favorite Content	Bollywood songs, trending songs and romantic playlists
Digital Habits	Heavy Instagram and YouTube user

What She Wants Easy access to trending songs and personalized playlists

Persona 2: The Independent Music Explorer

Category	Details
Name	Arjun
Age	22
Location	Bengaluru, Karnataka
Course	Engineering Student
Interests	Indie music, rock, technology, gaming and podcasts
Music Habit	Uses headphones several hours a day
Favorite Content	Independent artists, alternative music and new releases
Digital Habits	Uses Reddit, YouTube, Instagram and technology websites
What He Wants	Discover new artists and create customized playlists

Persona 3: The Regional Music Lover

Category	Details
Name	Priya
Age	20
Location	Ahmedabad, Gujarat
Course	BBA Student
Interests	Gujarati, Hindi and Punjabi music, fashion and social media
Music Habit	Listens to music while studying, travelling and exercising
Favorite Content	Regional songs, Bollywood music and workout playlists
Digital Habits	Frequently uses Instagram, WhatsApp and YouTube

**What She
Wants**

A large collection of regional and Hindi songs with personalized recommendations

Interesting Insight:

The most interesting insight is that college students do not have identical music preferences. Some prefer Bollywood songs, while others want independent or regional music.

Therefore, a music app should use **AI-powered personalization** to recommend different songs and playlists according to each student's listening behavior rather than giving everyone the same content.

4. Customer Funnel Diagram for a BookMyShow-Like App

Question:

Draw or digitally sketch a funnel diagram for a BookMyShow-like app, labeling each stage as Awareness, Interest, Consideration, Conversion, and Loyalty. Write one digital marketing action you would take at each stage to move users forward.

Answer:

Digital Marketing Funnel

Marketing Action at Each Stage

Funnel Stage	Digital Marketing Action	Objective
Awareness	Run Instagram, YouTube and Google advertisements for new movies and offers.	Make users aware of the app
Interest	Publish movie trailers, Reels, celebrity content and movie recommendations.	Generate curiosity
Consideration	Show ratings, reviews, theatre options and personalized discounts.	Help users make a booking decision
Conversion	Provide a simple booking process with first-booking offers or cashback.	Encourage the first ticket purchase
Loyalty	Send personalized movie recommendations, loyalty rewards and special offers.	Encourage repeat bookings

Final Conclusion:

The customer journey begins with **awareness** and gradually moves users toward **interest, consideration, conversion and loyalty**. Digital marketing should provide the right message at each stage—for example, advertisements for awareness, useful information during consideration, discounts for conversion and personalized rewards for loyalty.
