

1. Pick any one app you use daily (Instagram, Zomato, Flipkart, etc.) and list 3 ways the app keeps you engaged (for example: notifications, daily streaks, personalized recommendations).

Answer: Instagram

Instagram keeps users engaged through different features and digital techniques:

1. **Notifications** – Instagram sends notifications about likes, comments, messages, followers, and new posts. These notifications encourage users to open the app regularly.
 2. **Personalized Recommendations** – Instagram recommends Reels, posts, and accounts based on what users have previously watched, liked, or followed. This makes the content more relevant and interesting.
 3. **Stories and Reels** – Short videos and temporary Stories provide fresh content throughout the day. Their quick and entertaining format encourages users to keep scrolling and spend more time on the app.
-

2. Design a simple Instagram-style poll for a story: create a question and two answer options, then write a short plan for how you would collect and display the number of votes for each option.

Answer: Instagram Story Poll

POLL QUESTION:

“What type of food do you like more?” 🍕 🍔

Option 1: 🍕 Pizza

Option 2: 🍔 Burger

Plan to Collect and Display Votes:

1. Post the question as an Instagram Story with the two poll options.
 2. Allow followers to select either **Pizza** or **Burger**.
 3. After 24 hours, record the total number of votes for each option.
 4. Calculate the percentage of votes received by each option.
 5. Create a simple bar chart or display the results as **Pizza – 60%** and **Burger – 40%**.
 6. Share the final results in another Instagram Story to encourage further engagement.
-

3. Write a sample push notification message that would encourage a user to return to a food delivery app like Swiggy or Zomato after 3 days of inactivity.

Answer: Sample Push Notification

 **We Missed You!** 🥰

Your favourite food is waiting! Get **50% OFF** on your next order today. Use code: **COMEBACK50**. 🔥

👉 **Order now and satisfy your cravings!**

This notification uses a **personal reminder**, **limited-time discount**, and **call-to-action** to encourage the inactive user to return to the app.

4. Analyze the Flipkart app's product page and identify 2 engagement features (such as wishlist, ratings, or 'people also bought') and explain in 2-3 lines how each feature encourages users to spend more time on the app.

Answer: Flipkart Product Page

1. Wishlist ❤️

The Wishlist feature allows users to save products they are interested in for later. Users can return to the app to check saved products, compare prices, or purchase them when there is a discount.

2. Ratings & Reviews ★

Ratings and customer reviews help users understand the quality and popularity of a product. Reading reviews and comparing different products keeps users engaged and encourages them to explore more items before making a purchase.

5. Use ChatGPT or any AI tool to generate 3 creative ideas for increasing user engagement in a music streaming app like Spotify, and write them down in your own words.

Answer:

1. Personalized Music Challenge 🎵

The app could create weekly challenges such as “**Listen to 5 new artists this week.**” Users could earn badges or rewards after completing the challenge, encouraging them to use the app regularly.

2. Friends Playlist Battle 🎧

Users could compete with their friends by creating playlists around a particular theme, such as “**Best Party Songs**” or “**90s Hits.**” Friends could vote for their favourite playlist, making music discovery more social and fun.

3. Daily Mood Playlist 😊🎵

The app could ask users about their current mood and automatically create a playlist based on it, such as **Happy, Relaxed, Energetic, or Sad.** This personalized experience would encourage users to return every day for new music.
