

1. Backlink Sources for an Indian App

Question 1:

Pick any one of these apps: Zomato, Flipkart, or BookMyShow. Identify 5 websites that could be good sources for backlinks to that app's official blog or website, and explain in one line why each is relevant.

Answer:

I have selected **Zomato**.

No.	Website	Why It Is Relevant
1	Times of India	Its food, lifestyle and technology sections can link to Zomato articles about restaurants, food trends and food delivery.
2	Indian Express	Its food and lifestyle content is relevant for articles about Indian restaurants, food culture and dining trends.
3	YourStory	It covers Indian startups and technology, making it suitable for Zomato's business and innovation-related content.
4	India.com	Its lifestyle and food sections provide a relevant audience for Zomato's food-related articles and guides.
5	Social Samosa	It covers digital marketing and social-media campaigns, making it relevant for Zomato's marketing and brand campaigns.

Conclusion: These websites are useful backlink prospects because they have relevant audiences and publish content related to food, lifestyle, technology, startups and digital marketing.

2. Backlink Prospects for a New Music Streaming App

Question 2:

Create a spreadsheet with 10 potential websites or blogs where a new music streaming app (like Spotify) could try to get backlinks. For each, include the site name, domain authority (use MozBar or a similar tool), and the type of content you would pitch for a backlink.

Answer:

The following is a spreadsheet-style table that can be copied into **Excel** or **Google Sheets**.

No.	Website/Blog	Domain	Approx. DA	Type of Content to Pitch
1	Rolling Stone India	rollingstoneindia.com	60	Article about Indian music trends and emerging artists
2	YourStory	yourstory.com	85	Startup story about the app and its technology
3	Times of India	timesofindia.indiatimes.com	94	Research article about changing music-listening habits
4	Indian Express	indianexpress.com	90+	Feature about regional Indian music and streaming
5	Hindustan Times	hindustantimes.com	90+	Guide comparing music-streaming platforms
6	afaqs!	afaqs.com	47	Digital-marketing case study about the app's launch
7	Social Samosa	socialsamosa.com	55	Article about Gen-Z, social media and music
8	Inc42	inc42.com	80+	Story about music technology and startup innovation
9	DesiMartini	desimartini.com	40+	Article about playlists and entertainment trends
10	ST Digital	stdigital.in	—	Article about independent artists and music distribution

Note: DA scores are approximate because Domain Authority changes over time and can differ between SEO tools. Before submitting the assignment, the scores can be rechecked using MozBar or a current Domain Authority Checker.

Suggested spreadsheet columns:

Website Name | Domain | Domain Authority (DA) | Content Type/Pitch

This makes the information easy to transfer into Excel or Google Sheets.

3. Backlink Outreach Email

Question 3:

Write an outreach email template requesting a backlink for a new food delivery app's blog post from a popular college fest website. Make sure your email sounds friendly, highlights mutual benefit, and includes a specific link you want them to add.

Answer:

Backlink collaboration for your college fest website

Hi [Name/Team],

I hope you're doing well!

I'm reaching out from [Food Delivery App Name], a new food-delivery platform focused on making food ordering convenient and affordable for college students.

We recently published a useful article titled **"10 Budget-Friendly Food Options Every College Student Should Try."** We believe it would be a helpful resource for students visiting your college fest website.

Would you consider adding our article as a resource in one of your relevant student, food, or college-fest articles?

Link we would love you to add:

<https://www.examplefoodapp.com/blog/budget-friendly-food-for-college-students>

We think this could be useful for your audience while also adding valuable information to your website. In return, we'd be happy to promote your college fest and its content through our social-media channels.

Thanks for considering the collaboration. We really appreciate the work you do for the college community!

Best regards,
[Your Name]
[Designation]
[Food Delivery App Name]
[Contact Information]

Note: The URL above is an example. It should be replaced with the actual URL of the food-delivery app's blog post.

4. Competitor Backlink Profile Analysis

Question 4:

Analyze the backlink profile of a competitor (choose an actual Indian app website, like Paytm or Myntra) using a free AI-powered SEO tool such as Ubersuggest or Ahrefs Free Backlink Checker. List 3 insights you discover about their link-building strategy.

Answer:

I have selected **Paytm (paytm.com)** as the competitor and used publicly available backlink-profile information associated with Ahrefs.

A reported March 2026 snapshot showed Paytm with approximately **18.5K referring websites and a Domain Rating (DR) of 80**. Ahrefs' backlink checker provides information such as referring domains, backlinks, DR and followed/nofollow links.

Three Insights About Paytm's Link-Building Strategy

1. Large number of referring websites

Paytm has links from thousands of different websites, showing that its backlink strategy has considerable breadth rather than depending on only a few websites.

2. Strong authority of the overall backlink profile

A reported DR of 80 indicates a strong backlink profile. This is likely supported by Paytm's extensive brand visibility, media coverage, business partnerships and references from finance and technology websites.

3. Strong brand-driven link acquisition

As a major Indian fintech brand, Paytm receives backlinks from news articles, financial

websites, technology publications, business websites and pages discussing its products and services. This suggests that creating newsworthy content and building brand visibility can generate backlinks naturally.

Conclusion:

Paytm's backlink profile demonstrates that an Indian app can build strong SEO authority through a combination of **high-quality editorial links, brand mentions, industry coverage, partnerships and a large number of relevant referring domains**. A new app should focus on obtaining relevant and authoritative backlinks rather than simply trying to increase the number of links.

Overall Conclusion

The four activities demonstrate the basic backlink-building process:

1. **Find relevant websites** that have an audience related to the app.
2. **Evaluate website authority** using metrics such as Domain Authority.
3. **Create useful content** that gives websites a reason to link.
4. **Conduct personalized outreach** explaining the benefit to both parties.
5. **Study competitors** such as Paytm to understand how established brands acquire backlinks.
